Rules of the Classrooms and Dissection Rooms

1. Upmost respect must be maintained when working with cadavers and anatomical specimen; they have been provided to the department by human donors.
2. Drinking, eating and smoking are strictly forbidden when working with anatomical specimen.
3. It is strictly forbidden to take photographs and videos of the anatomical specimen or to take the specimen out of the dissection rooms.
4. Students of the 1st and 2nd Medical Faculties are only allowed in the classrooms and dissections rooms when under the supervision of a class teacher.
5. Before entering a classroom or dissection room, each student is required to wear a white coat, a name badge and gloves and have a change of shoes (or wear shoe covers), anatomical tweezers and equipment for taking notes.
6. Each student must take of their coats and bags and put them out of the way (on the coat hangers) before each practical class. Only gloves, dissection instruments, textbooks and writing equipment are allowed to be brought to the desks. When leaving the classroom to go to the dissection room, students will leave their belongings in the classroom and the class teacher will lock the door of the classroom. At the end of each practical class the students will carefully make sure that they take all their belongings away with them and they leave the classroom in an orderly manner (thrown away all rubbish, put chairs back, shut windows).
7. If a student leaves any of their belongings in a classroom or dissection room, they can ask their class teacher, whether it has turned up in the lost and found department.
8. During the dissection courses students can use the cloakrooms of the anatomy department to store their belongings. The cloakrooms can be accessed by using a passcode, which is regenerated before every dissection.
course. Despite this, theft of objects in the cloakrooms does occasionally occur and thus students are advised not to leave their belongings in plain site, but to keep in the lockers. Students are required to bring their own padlocks for the lockers.

9. At the end of each day of the dissection course, students must wash their dissection instruments and their hands in the sinks in the dissection rooms.

10. Any injury occurring in the dissection rooms must be reported to the class teacher. Any student injured during the dissection course will be sent to the First Surgical Clinical of the First Faculty of Medicine of Charles University for treatment and, if necessary, tetanus vaccination. All injuries will be reported and recorded.

11. Pregnant students are not allowed to take participation in practical classes and dissection trainings. Pregnant students will thus have to prolong their studies through an individual study plan after agreement with the study department.
